Prateek Punetha

DevOps and AI Automation Engineer | Linux | Python | Docker | CI/CD | LLM Integrations

Pune, India | hi@prateekpunetha.dev | prateekpunetha.dev | github.com/prateekpunetha | linkedin.com/in/prateekpunetha

PROFESSIONAL SUMMARY

Analyst Trainee at Cognizant focused on DevOps, automation, Linux administration, Python scripting, Docker, CI/CD, API integrations, and practical AI/LLM workflows. Built and published Tickr as a Microsoft Teams app for a client environment, using local Ollama classification and ServiceNow API automation to convert chat requests into structured workflow records. Strong foundation in scripting, system administration, deployment, automation, and user-focused AI tools.

TECHNICAL SKILLS

Operating Systems and Platforms: Linux, Microsoft Teams, ServiceNow, AWS EC2, AWS S3

DevOps and Infrastructure: Docker, Git, GitHub Actions, CI/CD, NGINX, REST APIs, environment configuration, application deployment

Programming and Scripting: Python, Bash, Node.js fundamentals

Automation and Tools: Shell scripting, Microsoft Bot Framework, ServiceNow REST APIs, Ollama, Playwright, GitHub Actions

PROFESSIONAL EXPERIENCE

Cognizant - Analyst Trainee

DevOps automation, API integration, Teams app development, LLM workflow automation
Aug 2025 - Present | Pune, India

- Built Tickr, a published Microsoft Teams app deployed across nearly 20 Teams groups for different client departments and parent-company teams, converting actionable chat messages into structured ServiceNow workflow records through API automation.
- Implemented Microsoft Bot Framework workflows for requester lookup, record creation, interaction creation, SLA summaries, and status lookups through ServiceNow REST APIs.
- Designed rule-based message filtering to reduce duplicate automation triggers from replies, conversation dumps, acknowledgements, and non-actionable chat.
- Integrated local Ollama-based LLM classification as a fallback layer with strict JSON responses, deterministic settings, and rule-based prechecks.
- Added Teams commands such as /summary and /inter plus scheduled SLA alert cards that query up to 2,000 active SLA records and group breach-risk alerts by ServiceNow assignment group.
- Published the solution as a Microsoft Teams app for real client use, improving workflow consistency and reducing repetitive manual ServiceNow entry.

PROJECTS

Tickr - Microsoft Teams AI Workflow Automation App

Microsoft Teams app, Bot Framework, ServiceNow REST API, Ollama, Node.js fundamentals
Selected client project | Published Teams app

- Designed the technical workflow for nearly 20 Teams groups, including chat monitoring, ServiceNow REST API automation, record summaries, batch interaction creation, and SLA breach-risk notifications.
- Used rule-based filters with local Ollama-based LLM classification to reduce noisy automation triggers from replies, duplicate messages, acknowledgements, and non-actionable chat.

BioAI - Blood Report Analyzer Web App

Python web app | *bioai.prateekpunetha.dev*
Personal project

- Built a Python-based web app that accepts PDF, TXT, CSV, and TSV blood reports and extracts common biomarkers into grouped health categories.

- Implemented scoring, reference-range checks, plain-language explanations, next-step suggestions, category filters, print/export support, and sample-report loading.
- Designed the app to avoid storing reports and to present educational summaries with clear disclaimers for user privacy and safety.

SysUI - Linux System Administration GUI

Python, Linux, system administration, security hardening
github.com/prateekpunetha/SysUI

- Created a Python-based GUI to simplify Linux administration tasks and support security hardening workflows for system administrators.

Additional Projects

Bash, Python, Playwright, Android, ESP32
github.com/prateekpunetha

- Built termux-setup for Bash-based Termux automation, bdaynotifier as a Python/Playwright Telegram bot, and Switchify as an Android app to control ESP32 relays.

EDUCATION

Institute of Industrial Computer Management Research, Pune University

Master of Computer Applications (MCA), Computational Applications | CGPA: 7.88/10
2023 - 2025

Vivekanand College, Shivaji University

Bachelor of Science, Computational Science | CGPA: 8.96/10
2019 - 2023

ADDITIONAL INFORMATION

Languages: English, Hindi, Marathi

Interests: Linux, automation, fitness, nutrition
